Quarterly Asset Class Report Taxable Fixed Income

Canterbury Consulting ("CCI") is an SEC registered Investment Adviser. Information pertaining to CCI's advisory operations, services, and fees is set forth in CCI's current Form ADV Part 2 (Brochure), a copy of which is available upon request and at www.adviserinfo.sec.gov. Information provided through CCI's Quarterly Outlook related to market or asset class performance figures is believed to be derived from reliable sources. However, CCI assumes no responsibility for their content or the manner in which the viewer utilizes such information. The performance information presented in certain charts or tables is for informational purpose only and represents historical performance based on available market data results for the quarterly period shown above and does not reflect any performance related to trading in actual accounts. Any recommendations or statement made in the Quarterly Outlook is not to be construed as specific investment advice. The viewer should be aware of the inherent limitations of data derived from the retroactive application of historical data developed with the benefit of hindsight and that actual results may differ. Actual performance with client accounts would be materially less than the stated performance results for the same period when including the deduction of advisory fees, brokerage or other commissions, and any other expenses that a client would have paid.

December 31, 2021

Canterbury Consulting recommends and communicates asset-class strategy with the objective of constructing a diversified portfolio of fixed income strategies designed to (in aggregate):

- Preserve after-tax wealth and mitigate volatility
- Maintain comparable exposure to the broad municipal market
- Focus exposure based on state domicile and after-tax returns
- Exhibit returns uncorrelated to equity markets

- Canterbury global fixed income portfolios are set up with a goal to deliver consistent after-tax and net-of-fees excess returns and moderate tracking error versus the Barclays Municipal Bond Index. The goal for taxable fixed income portfolios are to have a high quality bias with sensitivity toward taxes.
- Canterbury’s fixed income portfolios seek to exhibit benchmark-like, after-tax yields and credit quality through more portfolio diversification and lower duration. Portfolio diversification will depend on the client’s state of domicile and individual goals (i.e. income vs. capital preservation).

Market Environment as of December 31, 2021

Fixed Income

Municipal Yield Curve

Yield Comparison

U.S. Municipal Issuance

- In December, the Fed expressed a more hawkish tone by communicating that they will reduce their asset purchases by a larger amount than originally planned. With the updated reduction in asset purchases, the Fed will be on track to end its taper program by March of 2022. By revising their taper timeline, the central bank is acknowledging the growing risk of persistent inflation.
- The intermediate portion of the municipal bond curve ended the quarter marginally higher as interest rate projections increased, meanwhile the long-end of the curve flattened. The treasury yield curve experienced similar moves, but in a larger magnitude.
- Muni/Treasury ratios along the curve decreased due to persistent demand for tax-exempt income. Higher income taxes remains likely as the Biden administration continues to push its 'Build Back Better' bill through Congress.
- Municipal bond issuance remained persistent in the fourth quarter and ended the year slightly higher than 2020 levels.

Market Environment as of December 31, 2021

Fixed Income

- Investment grade (IG) spreads widened by approximately 10 basis points over the quarter while high yield (HY) spreads marginally tightened. Credit spreads across IG and HY continue to be below pre-pandemic levels.
- The default rate on loans and bonds peaked in 2020 due to accommodative monetary & fiscal policy. As a result, overall bankruptcies are at their lowest levels in over a decade.

Market Environment as of December 31, 2021

Fixed Income

Developed Yields

EM Yields (Local Currency)

- Developed sovereign bond yields ended the quarter relatively unchanged. Countries that faced higher inflation prints and hawkish central bank signaling saw long-term yields rise higher than others.
- Emerging markets (EM) sovereign yields remained relatively stable on a quarter-over-quarter basis, with the exception of Turkey. Turkey continues to face high inflation and loose monetary policy.
- EM currencies ended the quarter with mixed results. Countries with higher central bank credibility generally performed better than others.

Source: Bloomberg

Goals

- Are clients seeking to preserve capital, generate total return, or blend the two within a fixed income segment?
- What level of risk related to portfolio correlation is the client looking to incur?

Interest Rate & Inflationary Environment

- How does the current interest rate regime and inflationary environment affect return and risk (i.e. stagnant, slow-rise, rapid rise)?
- What level of interest rate volatility is the client willing to take?

Risk Tolerance

- How much risk is a client willing to take?
- Duration, yield curve positioning, sector exposure, credit exposure, the correlation to equities, and the client's distribution flows are important factors to measure.

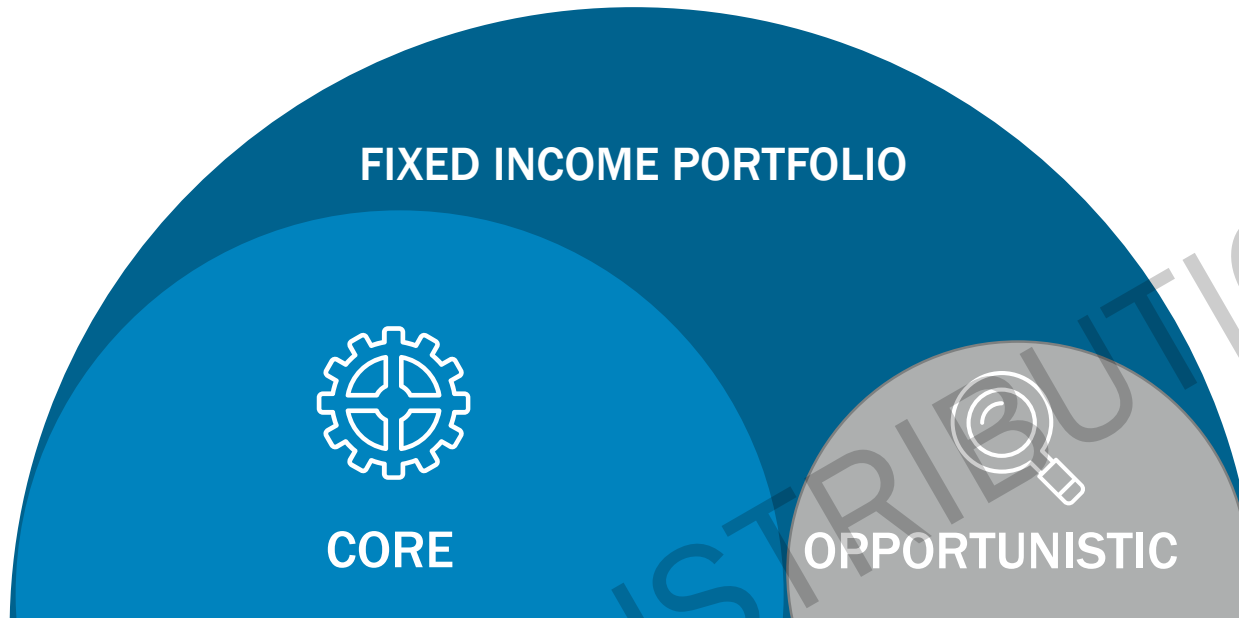

Tax Considerations

- Is the client's status taxable or tax-exempt?
- Does the client have a higher threshold given the respective tax situation?

Time Horizon

- Does the client have short term or long term goals?
- Are spending requirements quarterly, annually, or longer?
- Is spending consistent with the return/risk profile of the portfolio?

Characteristics

- Low volatility
- Uncorrelated to equities
- U.S. Focus

Exposure

- Treasuries
- Agencies
- Investment grade corporate
- MBS

Characteristics

- Income orientated
- Total return focus
- Uncorrelated to core bonds

Exposure

- Non-U.S. developed sovereigns
- EM sovereigns
- High yield
- Bank loans
- Private debt
